

ToolSentry®

Tool Management Solution

Overview

ToolSentry is the world-class tool management solution that tracks tools, equipment, and consumables. **ToolSentry** is easy to use and provides the functionality that other tool tracking programs lack. **ToolSentry** can use either PDAs or PCs to scan bar codes and assign items to a job, location, and employee thus making on site and remote warehouse scanning easy and effective. And **ToolSentry** is cost effective since there is no per client licensing.

Features

- Track consumables, tools and equipment so you know where your tools are located thus reducing lost tools and expenses.
- Full reconciliation of ticket transfers allowing you to know exactly where a tool or piece of equipment is assigned minimizing cost.
- Complete tool transfer history for better utilization of tools and job costing.
- Utilizes hand-held or PC attached scanners – So easy to use, all employees can use it.
- PDA can synchronize with the database through a networked PC, over a wireless LAN, or through the cellular phone network, so you can sync from anywhere. This increases usability and reduces cost.
- Rugged industrial grade technology available to match your work environment.
- Client/Server architecture and no additional modules required minimizes your implementation costs.
- Web interface enables you to view tool assignments from the job site.
